

Developer

Technology

Main Purpose

As a Developer, you'll play an important role in the development of new and existing BigHand products. As part of a high performing Agile team you will be writing new software to help your team continuously deliver new features. Quality is key for BigHand and you will need to take personal pride in writing clean, testable code that your team is proud of.

The successful developer will have good communication ability along with knowledge of some of the technologies used by the team such as .NET 4.5+, SQL, Entity Framework, MVC, HTML5, Angular2, Prism and WPF.

Background Information

BigHand is a leading software technology company with a big difference. It's not just what we do, but how we do it. We specialise in speech, task delegation, document creation and process improvement solutions that help our customers achieve more in less time.

Our vision is to be the industry's preferred, most supportive and helpful technology partner.

We aim to achieve this by harnessing our genuine enthusiasm and skill for helping busy people be more effective.

Key Responsibilities/Accountabilities

- Develops new software products and services.
- Maintains and enhances the existing BigHand products and services
